New Mechanisms, Diverging Meme Markets

Issue 02 | November 2-6, 2026 | Published every Friday

THE WEEKLY VIEW

This week focused on token-launch mechanisms, agent-based features and community remixes, but new narratives did not bring a broad, synchronized rally. JAGENT's market cap fell sharply from Monday's observation point. GM surged and swung widely around the meme exchange between Elon Musk and CZ. GATO and CHOO continued to generate community content, while AI and event-driven memes showed mixed performance. The next test is whether new features can sustain trading activity, and whether liquidity holds up after the initial attention fades.

Five themes at a glance

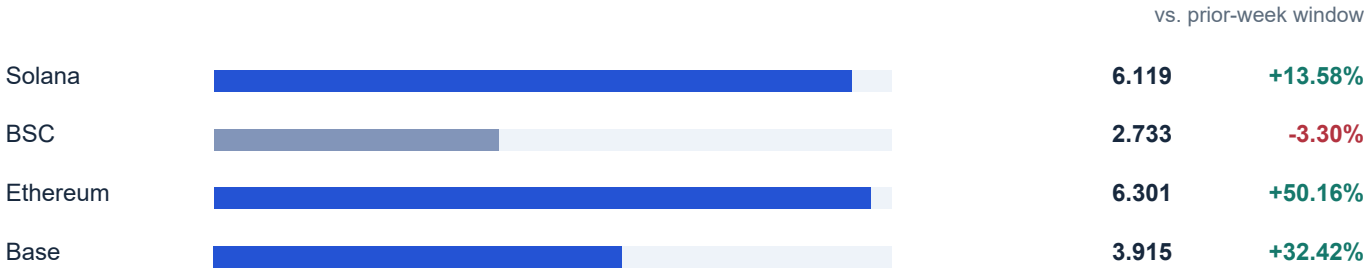

01	**Launch mechanisms**	Flap enables direct pool creation and Corla integrates it; delivery of announced rewards remains the test.	02
02	**Agent features**	JAGENT keeps adding features, while its observed market cap has fallen sharply.	02
03	**GM volatility**	GM surges, retraces and rebounds; related memes show mixed performance.	02
04	**Community content**	GATO and CHOO keep producing content, but animal-themed tokens diverge.	03
05	**AI and event memes**	DESSA and RAMBO move in opposite directions; follow-through after trending topics remains uncertain.	03

Market context [16]

BTC	ETH	BNB	SOL
75,763.46	2,232.25	689.99	89.66
-2.85%	-1.53%	-3.48%	-5.41%

Prices in USDT. Change from Nov 2, 00:00 to the Nov 6, 15:44 snapshot (UTC+8).

Mechanisms and event-driven trading

NOV 2-6, 2026

01 Flap Expands Launch and Reward Mechanisms

Flap launched the GMGN Callout Vault this week and published its Pool Launch approach to direct pool creation; Corla subsequently integrated it. Direct pool creation allows projects to bypass the bonding curve, set their own initial pool parameters and burn liquidity-provider (LP) tokens in the pool-creation transaction. Corla also announced a dedicated community-token buyback and follow-up support plan. The focus now is on adoption and delivery of the announced allocations; the buyback plan still needs to be assessed against actual execution.

[2] [3] [4] [5]

02 Agent Features Evolve, but Prices Remain Under Pressure

AGC reported completing its third halving of minting rewards. JAGENT expanded from identity minting into a Boss game and tiered referral incentives. However, JAGENT's market cap fell from about $6.02 million at Monday's observation point to $1.56 million at the cutoff, while AGC's primary-pool price was down 38.55% over the preceding 24 hours. After the feature updates, sustained participation and trading activity remain the key tests.

[6] [7] [8]

03 GM Surges Around the Musk-CZ Meme Exchange

At 14:56 on Nov 6, Elon Musk replied to Billy Markus's good-morning market-watching post with a CZ meme; CZ replied with an image at 15:43. Market commentary linked the exchange to BSC's GM (GREEN MORNING) narrative. Measured against the same pool's minute closing price before Musk's reply, GM was up about 434% at 15:27, roughly half an hour later. The gain narrowed to 276% at 15:57, roughly an hour later, then returned to 439% at 16:44, showing sharp short-term swings. In the 15:44 snapshot, SAFU and Chinese Can Fly were up 6.76% and down 5.46%, respectively, over the preceding 24 hours. The other established memes in the group did not rise together.

FIGURE 2 GM: surge, retracement, and renewed rise

Change from the pre-reply baseline (%)

Same primary pool and the 14:55 one-minute candle close as baseline. Times show actual minute closes: 15:27, 15:57 and 16:44 correspond to candles labelled 15:26, 15:56 and 16:43. Nov 6, UTC+8.

Community creation and token snapshot

NOV 2-6, 2026

04 Solana Community Remixes Show Signs of Continuity

GATO extended its game-cat theme into everyday character-based content and appeared in four of this week's morning briefings. CHOO completed its art selection, and its community continued publishing content. Their market caps at the cutoff were approximately $11.15 million and $4.60 million, respectively. By contrast, RICO, another animal-themed token, fell from about $214,000 at Tuesday's observation point to $61,000. Continued creative output provides something to track, but tokens sharing a theme still showed markedly different performance.

[1] [9] [10]

05 AI and Event Memes Keep Appearing, with Fast Reversals

RAMBO generated community remixes around computer memory and AI, while DESSA continued the voice-AI theme. At the cutoff, their primary-pool prices were down 32.18% and up 58.91%, respectively, over the preceding 24 hours. The New York mayor's COGE wordplay was also turned into a token by the community. Meanwhile, the Star Wars-themed Anakin fell from a market cap of about $4.60 million on Monday to $29,000. A topic's initial trigger and the persistence of trading activity need to be assessed separately.

Market-cap comparisons reflect only the stated observation points, not full-week returns. Newly issued tokens and different supply models are not directly comparable. Primary-pool volume is not total market-wide volume.

What to watch and source notes

NOV 2-6, 2026

The weekend and the week ahead

01 Delivery of New Mechanisms

Watch new applications of Flap's direct pool creation, execution of Corla's buyback, and JAGENT's Boss settlement scheduled for Nov 10 at 17:41 or its early-defeat condition. Assess these against actual project progress and on-chain results.

[3] [5] [8]

02 Activity After Community and Celebrity Attention

Track GM's trading continuity and pool liquidity after the exchange drew attention, alongside content updates from GATO, CHOO and DESSA. Watch whether activity persists after sharp rallies and pullbacks.

[9] [10] [12]

03 Macro Releases and Platform Recovery

US nonfarm payrolls are scheduled for Nov 6 at 21:30, followed by CPI on Nov 10 at 21:30 and PPI on Nov 13 at 21:30. Binance continues to restore withdrawals in stages by asset and network; watch subsequent announcements. All times are Beijing time (UTC+8).

Nov 6 at 14:56:32, Beijing time (UTC+8); an image reply to the original post.

[21] CZ's Image Reply to Musk

Nov 6 at 15:43:19, Beijing time (UTC+8).

[22] GREEN MORNING Market-Narrative Coverage

Reproduces BlockBeats' interpretation linking the CZ meme to GM. The gains in this report are calculated separately from same-pool minute data.

[23] GM Minute Data from the Same Primary Pool

Using the close of the candle labeled 14:55 as the baseline, closes of the 15:26, 15:56 and 16:43 candles give gains of 434.49%, 276.35% and 439.07%. Candles are labeled by opening time; their actual closes, including the baseline, occur at 14:56, 15:27, 15:57 and 16:44. All times are Beijing time (UTC+8).

How to read the numbers

Regular market data: Nov 6, 15:44-15:45; original editorial cutoff: 15:50. GM events and complete minute closes extend to 16:44. All are Beijing time (UTC+8). The DEX comparison uses UTC Nov 2-4 and Oct 26-28; it does not represent a full week or only Meme assets. Historical observation points come from the five published morning briefs. Live data at the linked endpoints will continue to change.
